(54) Title: PACKAGING FOR A BLISTER PACK

(57) Abstract: Packaging for a blister pack (15) containing medication pills is in the form of a container (16) having a tray (17) for receiving the blister pack (15) and a lid (18) hinged to the tray (17), for movement between open and closed positions. A pin (30) or (34) is carried by one of the tray (17) and lid (18) to project towards the other of the tray and lid. The pin (30) is configured to trap the blister pack thereon, between the tray (17) and a broken-away part (29) of the lid (18), whereas pin (34) has one or more barbs (35) to retain the blister pack thereon. When a blister pack (15) has been pushed on to the pin (30) or (34), removal of the pack from the packaging is resisted.
